A. Equal reads; known r=.75, a=.80
Bayes error
Number of reads
One root: reread or copies
One read per independent root
Same-root floor: 1-r
Persistent reading error control
B. Two specified policies; B=4, read cost=1
Bayes error
Root activation cost / read cost
Repeat one root
Fresh roots
c / read cost = 1/3
C. Common cost cap; known r=.75, a=.80, c=1
Bayes error
Hard budget
Repeat
Fresh
Best arbitrary static depths
Finite-horizon optimal adaptive
D. Conditioning on all-positive observations
Posterior confidence
Number of same-root reads
Correct same-root posterior
Wrong URL-iid posterior
Claimed confidence target .95
